## Key Vocabulary:

<u>Nutrition</u>: a substance in food that is important for the body to be healthy and grow

Balanced Diet: Eating from all food groups to ensure you are healthy

<u>Skeleton</u>: The skeleton protects our internal organs, keeps us supported and helps us move.

Support & Protect: help and keep safe

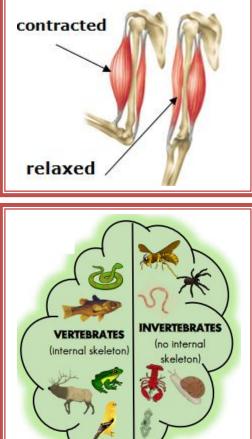

<u>Vertebrates</u>: An animal that has a backbone and a skeleton including humans

Invertebrates: An animal that does not have a backbone

<u>Muscles</u>: Soft tissue within an animal's body that connects two bones and which you use when you make a movement

## Muscles

Skeletons move because bones are attached to muscles. When a muscle **contracts** (bunches up), it gets shorter and so pulls up the bone it is attached to. When a muscle **relaxes**, it goes back to its normal size.

## Holy Family Halewood

Year 3/4 Science Ourselves and Other Animals

## Learning Objectives:

- To identify that humans get the nutrition they need from what they eat
- To identify that a balanced diet is needed in order to stay healthy
  - To investigate which foods different animals eat
- To explore human and animal skeletons
- To find out about how the skeleton supports and protects the body and to investigate how invertebrates are supported
- To find out what muscles are and how skeletal muscles help us to move

<u>Carbohydrates</u> – Main source of energy for our bodies (rice, potatoes, pasta and bread).

<u>Protein</u> – Repairs and builds muscles, organs and immunity (fish, meat, eggs and cheese).

<u>Sugar and Fats</u> – Stored for energy and creates a layer of fat to keep us warm. Should not have too much of these (chocolate, sweets, butter, oil, cream).

<u>Vitamins and Minerals</u> – Keeps us growing and fighting infections (fruit and vegetables).
