Key Vocabulary

Sun exposure – having skin that is open to the sun's rays without protection.

Vaccination – A medical preparation that protects a person from an illness by making them immune

Bacteria – very tiny, one-celled organisms which need nutrition from their environment. Sometimes, these nutrients are from the human body.

Virus – very small particles that can infect animals and plants and make them sick

Fungi – is a germ that lives in warm, dark, damp places. Example of a condition caused by fungi is Athlete's Foot, which is where your feet become all flaky and itchy.

Immune – Protected from an illness, either because a person has had the illness before or because they have received a vaccine.
